

Project Description:
EU AI Act Q&A Competition

The competition

1. Goal

Provide an assessment of purpose-driven conversational AI systems to answer questions regarding the AI Act (2024/1689, 13 June 2024) in a faithful and reliable manner.

2. Who can participate

Anyone who is willing to test their AI system.

3. What does a participant get?

A best-effort, automated assessment of their systems against our benchmark.

4. What does regenold do with the results data?

regenold reserves the right to communicate, publish and distribute the answers received by the participants' AI systems and their results in any shape or form.

However, each participant will first be given the possibility to assess their results and decide whether they prefer their name to be anonymized.

What is measured?

1. Can we trust the answer?

The proposed answer is evaluated across question-specific ground-truth correctness criteria.

2. Can we look up the information?

The proposed references are checked against ground-truth references.

3. Is the answer sufficiently concise?

The length of the answer is assessed with respect to an exemplary ground-truth answer. Similarly, the amount of proposed references is checked against ground-truth ones.

4. Is the tone appropriate?

The clarity and appropriateness of the tone is confronted with some examples.

5. How long does it take to get an answer?

The latency between sending a question and receiving an answer is measured.

EXTRA: Performance in multi-turn conversation

The aspects above are tested again within a multi-turn simulation.

Technical requirements

1. Provide an API service

Provide an API that enables regenold to send a conversation history to your system and receive an answer back. All questions pertain to the AI Act (2024/1689, 13 June 2024).

2. Input format

The API should receive a conversation history in JSON format that follows the standard of OpenAI/LiteLLM.

3. Response format

The response should be a JSON with fields:

- **reasoning** (str): Some questions will ask your system to reason and store its reasoning here, to keep the final answer “clean” from intermediate steps. You can always use this field if you so wish (e.g. with your system prompt) – but it will not be considered and might increase latency.
- **answer** (str): Short (1-4 sentences) but professionally worded answers are encouraged.
- **references** (list[str]): Should contain the minimal set of relevant references. Can only be “Annex” or “Articles”, with a Roman or Arabic numeral (respectively) and optionally a sub-point, after a dot symbol. Example:
 - Annex III or Annex III.2 – NOT Annex 3, Annex 3(2), Annex III . 2, Annex III-2, etc.
 - Article 3 or Article 3.2 – NOT Article III, Article III.2, Article 3/2, etc.

You receive a JSON with:

```
[  
  {"role": "user", "content": "..."},  
  {"role": "assistant", "content": "..."},  
  ...,  
  {"role": "user", "content": "..."}  
]
```

You return a JSON with:

```
{  
  "reasoning": "Can optionally be empty",  
  "answer": "The answer is 42",  
  "references": ["Annex IV.2", "Article 3.1"],  
}
```

Example questions

1. Does the technical documentation of a high-risk AI system require to provide specifications regarding the required hardware?
2. Are AI systems intended for emotion recognition from biometric data always prohibited?
3. Is an AI that transcribes doctor–patient conversations prohibited? Or is it high-risk as per the use cases of Annex III of the AI Act?

What happens next?

1. You receive an individual report

Based on the measures described in slide 3, we evaluate the provided AI system and summarize the results in an individual report. The report includes the performance of your system as well as the performance of popular off-the-shelf methods as a reference. We do not share the performance of other contestants. You are free to use the results to promote your system, as described in the *Agreement*, but the results do not provide any warranty about your system's capabilities. Further contractual terms please refer to the *Agreement* provided separately.

2. You have a right to opt-out

You may choose to “opt-out”, for example if you are unsatisfied with your results. In that case, you shall inform in writing/e-mail your personal technical/legal contact named on slide 6 within 10 business days from when we communicate the results to you. If you opt-out, we will anonymize your entry – but still use the results, in an anonymous form. If you contact us to opt-out after the 10 business days deadline, we will anonymize your entry in our use of the results from that point in time forward: we will not redact any previously published or distributed material.

3. We use the results

We have the right to use the results (possibly anonymized as per point 2) for any of our own purposes. In particular, we plan the following next steps of the Project/Competition:

- **This competition:** after the opt-out period of 10 business days, we will publish the results of the present challenge. The challenge runs during May and June 2026 and allows a contestant to participate only once. The results will be published and distributed in the form of one or more articles, webpages, and/or related social posts. Differently from the individual report, this material will include the performance of all contestants (some of which anonymized as per point 2).
- **Live benchmark:** similarly to state-of-the-art LLM and agents benchmarking, we intend to use the results of this competition as seed for what will become a live benchmark, with evolving results, where contestants can participate at any time and submit updated systems – we'd be very grateful to see your ongoing participation in the future.

Thank you
